

Title: Find Money in the Water System Budget: Energy Management Project Ideas, Prioritization, and Implementation

Date: June 9, 2015

Time: 2:00 – 3:00PM EDT

Description: For many water systems, the electric (or energy) bill is one of the largest operating expenses regularly incurred by the water utility. It is also one of the most controllable operating expenses a water utility will have. However, even after an energy assessment has been completed and a baseline of energy usage constructed, water utility managers may lack ideas for projects that they could undertake for energy management. Or they may be unsure how to prioritize competing energy management project ideas, and how to implement those projects. This webinar will present some ideas for sample projects, and will focus on how to prioritize and implement such projects.
